Summary

Software engineer (B.Tech ECE, 2027) with three production internships across full-stack web, mobile, and AI. Currently building LLM agents on the Claude API at 10ex.ai (FastAPI, React, PostgreSQL); previously cut API latency from 10s to under 200ms with Redis caching at Cerope. Strong in RAG, vector search, real-time systems, and AWS.

Experience

10ex.ai | **Software Development Engineer Intern** | *Hyderabad, India* — Sep 2026 – Present

- Built an embeddable AI website chatbot (TypeScript widget, FastAPI, Claude API) with streamed replies, a live-preview builder, draft-to-publish releases, and human takeover from the team inbox.
- Shipped an AI blog agent that writes posts and publishes, updates, or unpublishes them on customers' Webflow CMS, with approval gates and edit-conflict detection.
- Built natural-language scheduling for agents (rules first, LLM fallback to cron) with semantic topic de-duplication in Qdrant; fixed a parser bug that ran agents up to **7x** more often than requested.
- Moved structured LLM output across **41 schemas** to JSON mode after Claude Opus 5.5 dropped forced tool calls, unblocking **100%** of failing background Blog Agent runs in production.

Cerope | **Full Stack Developer Intern** | *Remote* — Mar 2026 – Aug 2026

- Reduced response latency on high-traffic APIs from **10s to under 200ms** and cut database load by **60%+** by designing a Redis caching layer with invalidation on writes.
- Shipped user-facing features across a production Next.js web platform and its React Native app, keeping both clients in sync on a shared REST API.

KodeCompiler | **Full Stack Developer Intern** | *Remote* — Nov 2025 – Feb 2026

- Built a sandboxed LeetCode-style judge (React, FastAPI) that runs code against **100+ test cases** in **10+ languages**.
- Engineered an isolated MongoDB query playground where hundreds of users safely run custom scripts in real time.

Projects

ProjectTeams | *React, Node.js, Vercel AI SDK, Socket.io, BullMQ, Redis, MongoDB, AWS* — Live | GitHub

- Architected a MERN team workspace with real-time co-editing and chat over Socket.io at **sub-100ms** message latency, deployed on AWS EC2 behind Nginx and Cloudflare.
- Built a RAG pipeline from scratch: BullMQ/Redis workers chunk and embed uploaded PDFs, and MongoDB Atlas Vector Search powers citation-grounded answers via the Vercel AI SDK.

AVMG | *Next.js, Node.js, Redis, BullMQ, FFmpeg, PostgreSQL, Prisma, Supabase* — Live | Frontend | Backend

- Designed a distributed video transcoding pipeline (FFmpeg, BullMQ workers) with job pickup latency **under 500ms**.
- Implemented subtitle harvesting via yt-dlp metadata-only fetches, cutting per-video transfer from **400MB to under 1MB**.

KropiGo | *Next.js, React, Node.js, MongoDB, Socket.io, RTK Query, Cloudinary* — Live | GitHub

- Developed a live peer-to-peer agri-marketplace with real-time price and transaction updates over Socket.io.
- Implemented role-based access control (RBAC), multi-tier admin workflows, and media upload pipelines via Cloudinary.

Technical Skills

Languages	TypeScript, JavaScript, Python, SQL
Frontend	React, Next.js, React Native, TanStack Router/Query, Redux Toolkit, Tailwind CSS
Backend	Node.js, Express.js, FastAPI, REST APIs, WebSockets (Socket.io), Server-Sent Events, BullMQ, Taskiq
AI / LLM	Claude API (tool use, structured output), LLM agents, RAG, vector search, Vercel AI SDK, Gemini API
Databases	PostgreSQL, MongoDB, Redis, Qdrant, Supabase, Firebase, Prisma
Cloud & Tools	AWS (EC2, S3), Nginx, Cloudflare, Git, Playwright, FFmpeg

Education

Jabalpur Engineering College (JEC) — 2023 – 2027

Bachelor of Technology (B.Tech), Electronics & Communication Engineering — Jabalpur, India

Achievements & Leadership

- **Winner, HackJEC 4.0 Hackathon:** 1st place among **50+ teams** for a full-stack health application built in 24 hours.
- **Technical Team, Karwaan JEC:** Deployed event platforms and hosted engineering workshops for college tech initiatives.
