Professional Summary

Full Stack Developer with Generative AI experience, shipping production web and mobile applications end-to-end. Track record of optimizing system latencies, building Gen AI pipelines, orchestrating real-time architectures, and deploying cloud infrastructure. Seeking full-time Software Engineering or Gen AI roles.

Technical Skills

Languages	TypeScript, JavaScript (ES2022+), Python
Frontend	React, Next.js, React Native, Tailwind CSS, RTK Query
Backend	Node.js, Express.js, Socket.io, BullMQ
Databases	MongoDB, PostgreSQL, Redis, Firebase, Supabase
Infrastructure	AWS EC2, Nginx, Cloudflare, VPS, Cloudinary
Gen AI & Tools	Vercel AI SDK, Google Gemini API, Prisma ORM, FFmpeg, Git

Experience

Cerope · Full Stack Developer Intern (*Remote*) 2025 – Present

- Shipped full-stack features for a production Next.js platform and cross-platform React Native app with 100% feature parity.
- Integrated Redis caching on high-traffic APIs, reducing response latency from **~10s to under 200ms** and DB load by **60%+**.

KodeCompiler · Full Stack Developer Intern (*Remote*) 2025

- Built a sandboxed, LeetCode-style execution engine in React and FastAPI evaluating **100+ test cases** across **10+ languages**.
- Engineered an isolated MongoDB query environment for hundreds of users to safely run custom database scripts in real time.

Projects

ProjectTeams · React, Node.js, Vercel AI SDK, Socket.io, BullMQ, Redis, MongoDB, AWS Live — GitHub

- Architected a MERN workspace with real-time co-editing and chat over Socket.io at **sub-100ms** latency, with inline AI features.
- Built a RAG pipeline from scratch with the Vercel AI SDK — worker-driven PDF chunking via BullMQ/Redis, and citation-grounded answers using MongoDB Atlas Vector Search.

AVMG · Next.js, Node.js, Redis, BullMQ, FFmpeg, PostgreSQL, Prisma, Supabase Live — Frontend — Backend

- Designed a distributed video transcoding pipeline via FFmpeg and BullMQ, slashing queue turnaround to **under 500ms**.
- Built subtitle harvesting with yt-dlp skip-downloads, reducing transmission overhead from **~400MB to under 1MB**.

KropiGo · Next.js, React, Node.js, MongoDB, Socket.io, RTK Query, Cloudinary Live — GitHub

- Developed a live peer-to-peer agri-marketplace supporting real-time transaction adjustments and dynamic listings via Socket.io.
- Implemented secure role-based access control (RBAC), multi-tier administrative workflows, and media routing via Cloudinary.

SolarVistar · React, Node.js, MongoDB, PostgreSQL, Prisma, RTK Query, Cloudinary Private Repository

- Delivered an end-to-end commercial CRM used by **10+ sales professionals** to track leads, site monitoring, and operational pipelines.
- Modeled relational data using Prisma and configured client-side RTK Query caching, cutting API traffic by **~40%** and dashboard latency to **under 300ms**.

Achievements

- Hackathon Winner** — **HackJEC 4.0**: Built and won 1st place with a full-stack health application under tight 24-hour constraints against 50+ teams.
- Technical Team Member** — **Karwaan JEC**: Managed technical systems, deployed event platforms, and hosted engineering workshops for college-wide tech initiatives.

Education

Bachelor of Technology, Electronics & Communication Engineering 2023 – 2027
Jabalpur Engineering College (JEC), Jabalpur
